CONTENTS

JANUARY, 1936

Stress Analysis by X-Ray Diffraction . . . . . C. S. BARRETT AND M. GENSAMER 1
Permeability of Compacted Powders . . . . . R. N. TRAXLER AND L. A. H. BAUM 9
Copper Oxide Rectifier . . . . . CHAUNCEY STARR 15
Electrical Conductivity of Glass. Part III. Current-Voltage Relationships with Highly Resistant Layers . . . . . H. R. KIEHL 20
Surface Tension of Molten Glass . . . . . W. B. PIETENPOL 26
Bending of a Centrally Loaded Rectangular Strip of Plywood . . . . . H. W. MARCH 32

FEBRUARY, 1936

Gassing of Lead Plate Storage Batteries During Charge and Discharge . . . . . W. B. PIETENPOL AND K. S. KELLER 43
Spectral Emissivities, Resistivity, and Thermal Expansion of Tungsten-Molybdenum Alloys . . . . . P. N. BOSSART 50

Letter to the Editor:

Action of Alternating and Moving Magnetic Fields Upon Particles of Magnetic Substances . . . . . H. STAFFORD HATFIELD 55

RHEOLOGY SECTION

Motion of a Viscous Fluid Under a Surface Load. Part II . . . . . N. A. HASKELL 56
Application of Chain Weight Loading to the Determination of Jell Strength . IRVING J. SAXL 62
Rheological Properties of Asphalts. III. A Viscosity Index . . . . . R. N. TRAXLER AND H. E. SCHWEYER 67
Simplified Extrusion Plastometer for Unvulcanized Rubber. . . . . J. H. DILLON 73
Book Review 77

MARCH, 1936

What X-Rays Can Do for Industry . . . . . VICTOR HICKS 79
Some Applications of Physics to Air Conditioning . . . . . EMERSON M. PUGH 85
How Physics Is Applied in the Oil Industry . . . . . PAUL D. FOOTE 91
New Electronic Tubes and New Uses . . . . . DAYTON ULREY 97
Theory of Acid Treatment of Oil Wells Producing from Limestone Reservoirs . . . . . M. MUSKAT AND R. D. WYCKOFF 106
Seepage Flux Under Dams of Extended Base Width and Under Coffer Dams Resting on Permeable Strata of Finite Thickness. I. . . . . MORRIS MUSKAT 116
Effect of an Electric Field on the Viscosity of Liquids . . . . . E. D. ALCOCK 126
Design of Tuned Resistance-Capacity Coupled Amplifiers . . . . . E. A. JOHNSON 130

APRIL, 1936

Dielectric Constant of Air at Radiofrequencies . . . L. G. HECTOR AND H. L. SCHULTZ 133
Low Pressure Arc Characteristics . . . . . J. D. COBINE 137
Quasi-Holonomic Dynamical Systems . . . . . GABRIEL KRON 143
Thermal Conductivity of Tungsten . . . . . WALTER C. MICHELS AND MARTHA COX 153
Thermal Stress in a Strip Due to Variation of Temperature Along the Length and Through the Thickness . . . . . J. N. GOODIER 156
Variations of the Rigidity Modulus with Changes in Applied Stress . GLADYS M. FRANCIS 160
Synthesis of Gear Tooth Curves . . . . . J. STILES BEGGS 163

Letter to the Editor:

Formula for the Birefringence of Vibrating Media . . JOHN W. COOKSON AND HAROLD OSTERBERG 166

MAY, 1936

VIII. The Correlation of the Distillation Range with the Penetration of Creosote into Paper Strips . . . . . C. J. FROSCH 167

RHEOLOGY SECTION

Heat Generation and Anisotropy of Rubber Compounds in the Flexometer . R. S. HAVENHILL 179
Effect of Pigment Particle Size on Some Physical Properties of Rubber Compounds . . . . . C. E. BARNETT 189
Force at a Point in the Interior of a Semi-Infinite Solid . . . . . RAYMOND D. MINDLIN 195

JUNE, 1936

Study of Polarization Capacity and Electrode Condition . . . . . IRVING WOLFF 203
Polarization Impedance at Low Frequencies . . . C. C. MURDOCK AND E. E. ZIMMERMAN 211
Radiation from an Antenna Over a Plane Earth of Arbitrary Characteristics . . . . . W. W. HANSEN AND J. G. BECKERLEY 220
Cathode Sputtering in Arc Discharges . . . . . LEWIS R. KOLLER 225
Heat Transfer Problem of Interest in Calorimetry . . . . . JULIAN M. STURTEVANT 232

Letter to the Editor:

Some Observations on the Movement and Demagnetization of Ferromagnetic Particles in Alternating Magnetic Fields . . . . . C. W. DAVIS 236

JULY, 1936

Piezoelectric Resonator and the Effect of Electrode Spacing upon Frequency . . . . . WALTER G. CADY 237
Further Studies on the Mathematical Physics of Metabolizing Systems with Reference to Living Cells. II . . . . . N. RASHEVSKY 260

AUGUST, 1936

Thermionic Amplification of Direct Currents . . . . . P. A. MACDONALD 265
Method for Studying Phenomena at the Cathode in Arc Discharges . . . L. R. KOLLER 295
Coefficient of Thermal Expansion of Magnesium Oxide . . . . . MILO A. DURAND 297
High Frequency Apparatus for Producing a Measured Heat Stimulus in Studies of Physiological Temperature Regulation . . . . ALLAN HEMINGWAY AND GLENN H. WITTS 299

RHEOLOGY SECTION

Further Tests of the Elasticity of Protoplasm . . . . . HANS H. PFEIFFER 302
Plastic Properties of Shellac . . . . . WM. HOWLETT GARDNER 306
Method of Analyzing Experimental Results Obtained from Elasto-Viscous Bodies . . . . . ANDREW GEMANT 311

SEPTEMBER, 1936

Some Special Solutions for the Motion of the Powder Gas . . . . . R. H. KENT 319
Flow of Gas-Liquid Mixtures Through Unconsolidated Sands . . . . . R. D. WYCKOFF AND H. G. BOTSET 325
Flow of Heterogeneous Fluids Through Porous Media . . . . . MORRIS MUSKAT AND MILAN W. MERES 346
Hydrodynamical Theory of Piston Ring Lubrication . . . . . R. A. CASTLEMAN, JR. 364
Mechanism of Division of Metabolizing Systems . . . . . JOHN M. REINER 368

OCTOBER, 1936

Photographic Study of Lightning . . E. J. WORKMAN, J. W. BEAMS AND L. B. SNODDY 375
Concentration Fields and Mechanical Forces in Metabolizing Systems . GAYLORD YOUNG 380
Atmospheric Potential Gradient Anomalies . . . . . FRANK L. COOPER 387
Motion of a Coil Spring Having Variable Tension and Variable Mass Per Unit Length . . .
. . . . . D. A. WELLS 395

NOVEMBER, 1936

Application of Infrared Spectroscopy to Rubber Chemistry . . . . . DUDLEY WILLIAMS 399

RHEOLOGY SECTION

Note on Heat Effects in Capillary Flow . . . . . MAYO D. HERSEY 403
Relation Between Absolute Viscosity and Penetration of Asphaltic Bitumens . . . . . .
. . . . . R. N. J. SAAL AND J. W. A. LABOUT 408
Rheology of Raw Rubber . . . . . M. MOONEY 413
Preliminary Study of the After-Effect or Drift in Rubber Under Constant Load . . . . . .
. . . . . MILTON L. BRAUN 421
Double Mobility of Some Non-Newtonian Fluids with Particular Reference to Cellulose Nitrate Sols . . . . . A. DE WAELE AND G. DINNIS 426

DECEMBER, 1936

Editorial . . . . . JOHN T. TATE 433
Distribution of Relaxation Times in Typical Dielectrics . . . . . WILLIAM A. YAGER 434
Electron Optics of an Image Tube . . . . . G. A. MORTON AND E. G. RAMBERG 451
Directional Characteristics of Any Antenna Over a Plane Earth . . . . W. W. HANSEN 460
Thermal Response of the Skin to Radiation . JAMES D. HARDY AND THEODORE W. OPPEL 466
Author Index to Volume 7 480
Analytic Subject Index to Volume 7 482

Notice to Contributors

Preparation of Manuscripts

General Instructions

Send manuscripts to John T. Tate, University of Minnesota, Minneapolis, Minnesota.

Papers must be in English, typewritten double spaced with wide margins.

Abstracts

An abstract must accompany each article. It should be adequate as an *index* and as a *summary*. As an index it should give all subjects, major and minor, concerning which new information is presented. As a summary it should give the conclusions of the article and all numerical results of general interest.

Mathematical Expressions

Make all expressions clear to the typesetter. Identify in the margin of the manuscript Greek letters and unusual symbols.

Use fractional exponents instead of root signs.

Avoid complicated exponents and subscripts. Should it be necessary to repeat a complicated expression a number of times it should be represented by some convenient symbol.

The solidus (/) should be used wherever possible for fractions.

References

References should appear as footnotes, numbered consecutively, and arranged thus:

A. B. Smith, Phys. Rev. **41**, 852 (1932).

Captions and Legends

Legends for figures must accompany manuscript. Each table should have a caption. These in all cases should be complete in themselves so as to make the data intelligible to the reader without reference to the text.

Illustrations

Plan figures for approximately one-half reduction. Wherever possible arrange figures so that after reduction they will not be wider than three inches. Lettering must be large enough to be readable after reduction.

Line drawings must be made with India ink on white paper or tracing cloth. Coordinate paper is not desirable, but if used must be blue-lined and all coordinates to be reproduced drawn with India ink.

Drawings which cannot be used will be returned to the author or redrawn at his expense.

Photographs should show clear black and white contrasts.

Avoid round and oval photographs.

Alterations

Take great care that each manuscript is typographically accurate. A limited number of alterations in proof are unavoidable, but the cost of making extensive alterations after the article has been set in type will be charged to the author.

Publication Charge

A portion of the cost of publishing the results of research must be regarded as an integral part of the cost of the research. In keeping with the policy which is effective for the Institute's publications a bill for **$3.00** per page will be sent to the authors of papers appearing in this journal. It is intended that the authors shall present these bills for payment to the institutions which have supported their researches. If the institution is unable to make payment the bills are to be returned marked "No Funds Available."

Reprints

As a partial return for the publication charge one hundred reprints without covers will be furnished free. Additional reprints may be obtained at a regular schedule of prices.

PROOF and all correspondence concerning papers in the process of publication should be addressed to the Editorial Secretary, American Institute of Physics, 11 East 38th Street, New York, New York.

THE AMERICAN PHYSICAL SOCIETY

F. K. RICHTMYER, *President*
Cornell University
Ithaca, New York

H. M. RANDALL, *Vice President*
University of Michigan
Ann Arbor, Michigan

W. L. SEVERINGHAUS, *Secretary*
Columbia University
New York, New York

G. B. PEGRAM, *Treasurer*
Columbia University
New York, New York

JOHN T. TATE, *Editor*
University of Minnesota
Minneapolis, Minnesota

PAUL KIRKPATRICK, *Local Secretary for the Pacific Coast*
Stanford University
Stanford, California

THE object of the American Physical Society is the advancement and diffusion of the knowledge of physics. It sponsors *The Physical Review*, *Physics* and the *Reviews of Modern Physics*. Upon the recommendation of two or more members, any person engaged in work in the field of physics or actively interested in physics may become a member; receive one of the journals; receive also *Science Abstracts* A, and the Bulletin of all meetings; and attend and participate in the seven annual meetings.

Annual dues: $10. Fellows, $14.

For further information address the Secretary as above.

THE SOCIETY OF RHEOLOGY

MELVIN MOONEY, *President*
U. S. Rubber Company
Passaic, New Jersey

EUGENE C. BINGHAM, *Editor*
Lafayette College
Easton, Pennsylvania

A. STUART HUNTER, *Secretary & Treasurer*
Du Pont Rayon Company
Buffalo, New York

THE Society of Rheology was formed in 1929 to advance the science of the deformation and flow of matter. It cooperates with the American Physical Society in editing *Physics* of which four issues per year are devoted to *Rheology*. All persons interested are invited to become members and participate in the proceedings at the annual meetings. Members receive without other charge than their dues all issues of *Physics* and the notices of the Society.

Annual dues: $6.

For further information address the Secretary as above.
